Impact Report
2018/2019
Dear friends,

In the year 2018 we celebrated our 30th anniversary.
Over these three decades we have reached 13.7 million people in the poorest regions of the world, providing access to eye health, education, rehabilitation, and human rights to persons with disabilities.

- In 2018 our partners performed 89,280 eye surgeries, saving eye sight and changing countless lives. Among them were 44,206 cataract surgeries and 21,824 eyelid surgeries in the late stages of trachoma.
- More than 16 million doses of medication against Neglected Tropical Diseases were distributed.
- 34,696 children and adults with disabilities received access to health and rehabilitation services in our programmes. 12,953 children went to school to develop their full potential and shape their own future.
- Light for the World launched the Her Abilities Award, the first international award to honour the achievements of women with disabilities in December 2018. The winners were selected out of 158 nominees from 52 countries. Three categories were awarded: Health & Education, Rights, Arts and Culture & Sports.

The coming years will be challenging, especially for our programme work in Mozambique, which was severely devastated by cyclone storms in early 2019. But changing the world is worth every effort. We will continue to work on all levels—from local to global—to create a world where everybody can take part and no-one is left behind. Thanks to the dedication of our donors and the professionalism of our partners, we are closer to this goal than ever before.

Karin Krobath
Chairperson Light for the World

Rupert Roniger
CEO Light for the World

Our Impact

One billion people in the world are living with a disability, 253 million have a visual impairment. The overwhelming majority live in underprivileged regions. Poverty and little access to health care is a major factor in acquiring a disability. Persons with disabilities face discrimination on a daily basis, are excluded from medical services, education, the job market, political decisions and community life. We work to change that.

We focus on the poorest and hardest to reach because those are the people who need our help the most. We create lasting change through collaboration with local partners such as eye clinics, schools, government actors, and Disabled People's Organisations. Our work is made possible with support from donors in countries including Austria, Belgium, Czech Republic, Germany, Italy (South Tyrol), The Netherlands, Switzerland, United Kingdom and USA.

Additionally, we distributed 16,286,999 doses of medication against trachoma, river blindness and lymphatic filariasis.

Women and men, girls and boys reached with crucial support, including eye health, rehabilitation and education.

89,280 EYE OPERATIONS

- 44,206 Cataract surgeries
- 21,824 Trachoma surgeries
- 23,250 other eye surgeries

34,696 PERSONS WITH DISABILITIES REACHED

- 23,137 in Africa
- 9,403 in Asia & Pacific
- 2,156 in Latin America

7,562 Persons reached participated in LIVELIHOOD AND INCOME GENERATING ACTIVITIES

12,953 Children with disabilities recieved SCHOOL EDUCATION
Our goal is for populations in Africa to access comprehensive, affordable and qualitative eye care. 75% of all cases of blindness or visual impairment are avoidable.

We scaled up our effort to train desperately needed ophthalmologists and other eye health staff from African countries; 68 have graduated so far, with 35 more currently in training. In Mozambique alone we doubled the number of ophthalmologists in the last three years. After the catastrophic cyclones that devastated the country in early 2019 and damaged our new eye clinic in Beira, medical staff are needed now more than ever. To combat trachoma and other infectious causes of blindness we supplied millions of people with medication, surgery and improved access to sanitation, focusing on the Tigray and Western Oromia region in Ethiopia. We will continue the fight.

At the start of our National Intervention on Uncorrected Refractive Errors in Uganda in 2008, less than 20% of the population had access to spectacles. Today it is between 40% and 50%. The Ugandan health system will continue this successful programme. We supply the population of southern Democratic Republic of Congo with eye health through a network of eye clinics and outreach services.
Empowerment

We believe that empowering persons with disabilities to participate equally in society is an effective way to reduce poverty and to contribute to a better world.

In the past three years we launched 10 new programmes to make livelihood projects and vocational training initiatives accessible to persons with disabilities. Our main focus is to get mainstream organisations and institutions on board, to create a truly inclusive society. At the same time our disability inclusion lab, based in The Netherlands, trains NGOs, partners, companies and governments on inclusion and develops hands-on solutions with them.

The Her Abilities Award was launched in 2018, the first global award honouring women with disabilities who achieved greatness in their life or field of work. The winners were chosen out of 158 nominees from 52 countries.

Our work in Disability Inclusion in Community Development focuses on early childhood development and breaking down barriers within communities. In 2018, the governments of Mozambique, Burkina Faso and Ethiopia agreed to incorporate rehabilitation in their health systems. We continue to work on facilitating access to medical services, education, human rights and livelihood for persons with disabilities on four continents.

Inclusive Education

Children and youths with disabilities are often left behind when it comes to access to education. In 2018, 12,953 children with disabilities went to school through the intervention of Light for the World, 42% more than in 2017.

With our ambitious initiative “One Class For All” we strive to make the education systems of Burkina Faso and Ethiopia disability-inclusive, improving the lives of millions of children in the coming decade.

In North-East India 185 teachers received training in inclusive education over the last two years and are now collaborating with 75 government schools.

THANKS TO YOUR SUPPORT: *

1,209,978 people reached with crucial support including eye care, rehabilitation and education

16,286,999 doses of medication against trachoma, river blindness and lymphatic filariasis distributed

1,071,520 eye consultations
89,280 eye operations

34,696 persons with disabilities reached with rehabilitation
7,562 people participated in livelihood and income generating activities

12,953 children with disabilities received education

* This covers the activities and impact of the legal entity Light for the World International and its members in 2018.
Facts & Figures 2018

69,872 Persons reached
5,246 Cataract surgeries
37 Mobile outreaches
3,106 Children with disabilities received rehabilitation
4,841 Children with disabilities accessed education

**Burkina Faso**

**Victorine can see**

In Burkina Faso, brewing is traditionally women’s work. Victorine Sawadogo, 55, is at it again, producing delicious millet beer with her daughters and sisters in law. Only a day ago she was blind from cataract. But an operation during an ophthalmic outreach campaign saved her eyesight. “I am so happy that I can see again and support myself and my family”, Victorine smiles.

**Eye Health**

In eye health, we focus on marginalised groups and people who are hard to reach, by offering comprehensive eye health to all. We support local eye clinics in their daily work and offer scholarships and training to ophthalmologists and other eye health staff. For the first time, we are now implementing a promising pilot project to address uncorrected refractive errors and bring eye health specifically to school children.

**Education**

Burkina Faso is one of two focus countries of our programme for inclusive education “One Class for All”. We strive to offer quality education to girls and boys of all abilities. By supporting children with disabilities from an early age and supporting schools to better include them in class, we have already achieved great success. Our priorities for 2019 include training of teachers and strengthening resource centres.

**Empowerment**

In our community-based rehabilitation projects we support women and men, girls and boys with disabilities to access medical care, education and to have an active role in society. But we also aim to change attitudes towards disability within the communities. Furthermore, to enable persons with disabilities in remote areas to earn an income and lead independent lives, we support inclusive livelihood programmes.
Facts & Figures 2018

- 456,752 Persons reached
- 944 Mobile outreaches
- 20,860 Cataract surgeries
- 2,646 Children with disabilities received rehabilitation
- 3,317 Children with disabilities accessed education

PROJECTS 2018

- 21 Eye Health (13 Eye Clinics)
- 6 Rehabilitation
- 19 Inclusive Education
- 4 Rights

Our Impact

NTDs drug distribution (medication against infectious causes of blindness)

- 2015: 8 Mio
- 2016: 10 Mio
- 2017: 13 Mio
- 2018: 16 Mio

Ophthalmologists trained by Light for the World in Jimma and Gondar:

- Total: 51
- up to 2016: 27
- 2017: +8
- 2018: +8
- 2019: +8

8-year-old Mareshet was born with cerebral palsy and never learned to walk, stand, or even sit on her own. She spent the first years of her life on a mat on the floor, or strapped to the back of her grandmother, who is her caregiver. Mareshet’s life was changed completely when she met a field worker from the community-based rehabilitation programme in Woliso a few years ago. Today, Mareshet can dress herself, eat without help and meet her friends with the aid of a walking frame. Her big goal is to go to school with the other children and to become a teacher.

Education

Quality education for children with disabilities is a main focus of our campaign “One Class for All”. Interlinked with our community-based rehabilitation (CBR) projects we support children with disabilities, train teachers, build up resource centres, and raise awareness for the right to education for all children.

Eye Health

The fight against avoidable blindness, including treatment for Neglected Tropical Diseases (NTDs) that can lead to vision loss, is at the forefront of our work. In Tigray and Oromia we are in the final stages of eliminating trachoma, the world’s leading infectious cause of blindness. We continue to support local eye clinics and university hospitals in their daily work and in training eye health staff for the country. Following our pilot project in Uganda on uncorrected refractive errors we plan to implement a similar project in Ethiopia.

Empowerment

With decades of experience we support persons with disabilities to access medical care and rehabilitation, facilitate inclusion into society and raise awareness on the rights of women and men, girls and boys with disabilities. We focus on increasing our partners’ knowledge on early childhood development and strengthening the link between CBR and inclusive education. Together with local and national Disabled People’s Organisations (DPOs) we work towards a future where nobody is left behind.
Facts & Figures 2018

- **245,675** Persons reached
- **4,157** Cataract surgeries
- **27** Mobile outreaches
- **873** Children with disabilities received rehabilitation
- **1,811** Children with disabilities accessed education

PROJECTS 2018

- **17** Eye Health (5 Eye Clinics)
- **18** Rehabilitation
- **4** Inclusive Education
- **3** Empowerment

Our Impact

1,826 children and young adults in education

1,078 male 748 female

One of our goals is to close the gender gap

Ophthalmologists more than doubled in the last three years

2015: 9 Ophthalmologists

2018: 22 Ophthalmologists

Due to his vision problems, Gildon is a shy boy who rarely ever smiles. He desperately wants to continue his education, but his visual impairment has become so much worse, that he is not able to walk to his school on his own anymore. Happily there is a chance for him now: he has already had his first appointment with Dr. da Gama, the first paediatric ophthalmologist in the country, and there is hope that he will be able to see, get to school, and smile again.

Eye Health
The devastating cyclone in early 2019 damaged our newly opened Eye Clinic in Beira, but fast emergency relief made it possible to resume services. When at full capacity, the clinic will treat 13,000 patients annually, and serve as an education centre for eye health staff. We offer scholarships to young Mozambican doctors to specialise in ophthalmology. 2018 also marks the final year of our large-scale campaign against trachoma, the world’s leading infectious cause of blindness, and other Neglected Tropical Diseases.

Education
In our inclusive education programmes, girls and boys of all abilities study together and learn from each other. In 2018, we targeted 47 schools to make their classes more inclusive for children with disabilities. Inclusive education programmes and community-based rehabilitation work hand in hand to support children with disabilities from early childhood, to help them achieve their full potential.

Empowerment
Light for the World plays a major part in the development of community-based rehabilitation (CBR) in Mozambique to increase the opportunities and quality of life for persons with disabilities. We successfully advocated to include CBR in government programmes and cooperate with Disabled People’s Organisations, inclusive sports and livelihood projects and support persons with disabilities to claim their rights.
**Facts & Figures 2018**

- **25,763** Persons reached
- **250** Cataract surgeries
- **288** Children with disabilities received rehabilitation
- **128** Children with disabilities accessed education
- **703** Reached with livelihood activities

**PROJECTS 2018**

- **2** Eye Health (1 Eye Clinic)
- **6** Rehabilitation
- **1** Inclusive Education
- **6** Empowerment

---

**Our Impact**

**OUR VISION**

- **Health Services**
  - Women and men, girls and boys with disabilities have access to health services

- **CBR established**
  - at community and IDP camps level

- **Education and Income Generation Activities**

- **Sports for Peace**
  - Unity and peaceful coexistence among youth including women & men, girls & boys with disabilities of different ethnic groups

**IMPACT 2018**

- **170** assistive devices such as crutches or protheses distributed

- **1262** people reached with CBR

- **128** students with disabilities enrolled; 703 with income generating activities initiated

- **514** people trained in disability inclusion

Nyamit can walk
For five years Nyamit has lived in a refugee camp. She and her family cannot return to their hometown due to the ongoing conflict. As a young girl, Nyamit could not walk on her own, but after successful surgery and rehabilitation provided by Light for the World, she can now get around on her own, meeting her friends, ending her isolation. And the 13-year-old can finally enrol in school and shape her own future.

General Situation
Since the founding of the young country in 2011, South Sudan has been suffering a devastating humanitarian crisis, strongly affecting the development and the sustainable implementation of all our programmes as well as the security of our partners and colleagues. Since 2016, the country programme has been seriously limited. Thus, our focus shifted from eye health to disability mainstreaming in humanitarian aid and supporting persons with disabilities in Internally Displaced People’s (IDP) camps.

Rehabilitation
Through our community-based rehabilitation projects, girls and boys, women and men with disabilities gain access to health, education, livelihood, social rehabilitation and empowerment. An initiative named „Sports for Peace“ successfully facilitates peaceful coexistence of different ethnic groups within the IDP camps, while at the same time including and supporting young persons with disabilities. Furthermore we share our experiences and expertise in disability inclusive humanitarian aid with others, providing training and consultancies for partners, governments and members of other organisations.
Ebrahim

While playing with his friends, Ebrahim injured his left eye. His vision deteriorated and within a year he went completely blind in one eye ...

“... I started having difficulties to see clearly and gradually I cannot see anything with my left eye.” His father took him to a hospital supported by Light for the World, where he received cataract surgery. “Coming here I was not sure that I will get my sight back. I was also very scared of the surgery. But my father encouraged me to go through it and tell me it is for my own good. But now I am very happy because I can clearly see,” said Ebrahim.

What we do

Affordable and high quality eye health is one of our key working areas. We target people without access to medical eye care in poorer regions of the world.

Cataract is the major cause of blindness worldwide (35%), followed by uncorrected refractive errors (21%) and glaucoma (8%). Therefore, one of our main goals is to enhance quality and accessibility of eye care services in the countries we work in. We partner with local hospitals to provide access to eye consultations and surgeries, organise mobile outreaches to areas which are hard to reach and provide spectacles and other vision aids. To build and maintain sustainable infrastructures, we support the training of ophthalmologists and other eye health staff. To combat infectious causes of blindness like trachoma, we conduct screenings and surgeries and distribute drugs against neglected tropical diseases (NTDs) that lead to blindness for millions. Light for the World has more than 30 years of experience in blindness prevention and sustainable programme work, changing thousands of lives every year.
Saving the sight of millions

80% of all cases of blindness are preventable. Visual impairment or blindness – caused by uncorrected refractive errors, cataract, infections and other diseases severely impact the daily lives of hundreds of thousands around the world.

**CAUSES OF BLINDNESS**

- 12.6 mio people are blind due to **cataract**
  - **treatable!** After cataract surgery, a person can see again.

- 124 mio uncorrected **refractive errors**
  - **treatable!** Many people just need a pair of glasses.

- 182 mio people live in danger of contracting **trachoma**
  - **treatable and preventable!** Antibiotics treat, facial cleanliness prevents infections.

**Facts & Figures**

- 253 mio people worldwide are visually impaired
- 36 mio of them are blind
- 9 out of 10 live in low and middle income countries
- 75% of visual impairment is avoidable
- 80% of blindness cases are preventable.

**79 PROJECTS 2018**

- 32 Eye clinics
- 25 NTD projects
- 22 Other eye health projects
José

When José from Mozambique was two years old, he could neither sit nor stand on his own. The diagnosis: Cerebral Palsy, paralysis of the muscles. His mother was devastated ...

What should become of her little boy? How can he go to school and later support himself and his family? Then the field worker Olga entered José’s life. They started training three times a week, until — one day — José walked his first steps on parallel bars. And there is no stopping him. Today, José goes to school with his sisters and plays with his friends.

What we do

Community-based rehabilitation (CBR), a method endorsed by the WHO since 1978, was originally designed to provide persons with disabilities with inexpensive access to physical rehabilitation. However, its scope has broadened considerably over the last 30 years.

Today, CBR is a strategy for inclusive development, specifically targeting the needs of persons with disabilities in low and middle income countries. While still focusing on the rehabilitation of individuals, we also work on the strengthening of rehabilitation in the health systems, as well as activating communities to promote and protect the rights of persons with disabilities. Our goal is to ensure that everyone has the chance to maximise their potential, to access mainstream health, education and livelihood services, and to become active contributors to the community and society at large. By integrating CBR in government structures and directly involving women and men, girls and boys with disabilities, we foster a sustainable local inclusive development.
Small steps — big impact

Community-based rehabilitation and inclusion of girls and boys, women and men with disabilities is one of the cornerstones of our work. Our goal is to build a society where everybody can take part and no one is left behind.

Facts & Figures

One billion people worldwide live with a disability.

50% of persons with disabilities cannot afford healthcare, increasing the risk of acquiring more disabilities and lowering life expectancy and quality of life.

74 PROJECTS 2018

54 CBR projects

20 Inclusive development projects
Wendabo was born without hands or feet, her father left shortly after her birth. Her mother had to beg in the streets to feed her children. A field worker from Light for the World approached the family and offered to help...

Rehabilitation for the girl, support for the mother and for the local school to include Wendabo in class. Today, Wendabo is learning to read and write with her friends, and moves around with a wheelchair, her mother sells rice at the market. “Wendabo is the first of our family to go to school and she is one of the smartest in her class”, her mother says proudly. The ten-year-old girl’s opportunities in life have changed completely.

What we do

Light for the World helps children with disabilities from the earliest possible age to develop their abilities. Our goal is to support education systems where all children can learn together and develop their abilities from early childhood through to vocational training and higher education.

Light for the World strives for a society that leaves no-one behind. We aim to address existing gaps in education systems and build local capacities for delivering inclusive and equitable quality education and promote life-long learning opportunities for girls and boys with disabilities. Through training of teachers, awareness raising in schools and among education officials, adapting learning materials, and removing barriers in school buildings, we achieve system change that aims to benefit many generations to come. We strive to allow everyone to access education at all levels, as well as other public services they need to live an independent life.
Knowledge is power

Nine out of ten children with disabilities are out of school, 80% of all children with disabilities live in developing countries. They are often excluded from education and society due to physical, ideological, systemic, or communication barriers.

**Facts & Figures**

- **264.3 mio** children are out of school worldwide
- **32.5 mio** children with disabilities in low and middle income countries are estimated to be out of school.

Girls, particularly with disabilities face double disadvantages in accessing education. Inclusive Education delivers more and costs less than segregated special needs education.

**HOW WE WORK TOWARDS LASTING CHANGE**

- **Locally** with children and their families, community-based rehabilitation workers, schools, teachers and communities
- **Nationally** with ministries, regional bureaus and governments to change education systems
- **Internationally** through partnerships and alliances advocating for disability-inclusive education

**43 PROJECTS 2018**

Mainly in Ethiopia, Burkina Faso, India and Mozambique
Christopher Oule used to work as a successful engineer in the oil and gas company Shell in Burkina Faso. When he irreversibly lost his sight due to an eye infection, his life changed completely...

In a school supported by Light for the World he learned to read and write in Braille. Today he is a pioneering disability activist and President of UN-ABPAM (The national union of organisations for blind and visually impaired people in Burkina Faso).

What we do

Light for the World works on local, national and international level for empowerment of women and men, girls and boys with disabilities. We focus on systemic change to sustainably promote the rights of persons with disabilities.

We strongly believe that every person is valuable and can contribute to society in a meaningful way. This includes women and men, girls and boys with disabilities. The UN Convention on the Rights of Persons with Disabilities is at the base of our work. We work on every level—from encouraging persons with disabilities to form their own organisations to advocating for inclusion in development programmes. Our mission is to influence decision-making processes from international to country level with the aim to promote systemic change towards inclusion of and accessibility. Because we want to live in a world where everybody can take part and no one is left behind.
Equal rights

In an inclusive community, every person is welcomed and valued. Light for the World advocates for the rights of persons with disabilities and includes them in programme planning and implementation.

Facts & Figures

1 billion people live with one or more forms of disability
80% in low-income countries
1 in 5 of the poorest people has a disability
3 out of 4 persons with disabilities in low and middle income countries are women.
The fight against poverty and injustice has to be disability inclusive and gender sensitive.

**Transparency & Anti-Corruption**

Those are the consolidated financial results of the legal entity Light for the World and its members.

Light for the World adopted an Anti-Corruption Policy in 2014 and is producing a biennial anti-corruption report, which is available on request.

**Reliability**

The member organisations of Light for the World have their accounts audited/reviewed by independent external auditors and have been granted quality seals in several countries. Donations to Light for the World are tax deductible in Austria, Belgium, Czech Republic, Germany, The Netherlands, Switzerland and the USA.

For further information on the financial figures of the different legal entities please download the national reports at: www.light-for-the-world.org
A BIG THANK YOU!

Partners and supporters

Light for the World believes in working together, pooling resources and knowledge, and collaborating with others to achieve our goal of creating a better world. We partner with national and international organisations and are members of various networks and platforms.

The full list of partners, supporters, memberships and alliances of Light for the World can be found under: www.light-for-the-world.org
"I can see again! Now I can work again and watch my grandchildren growing up."

- Fatenei Abebe, 75, Ethiopia
